### **INSTRUCTIONS FOR USE**

The following Coverage Policy applies to health benefit plans administered by Cigna Companies. Certain Cigna Companies and/or lines of business only provide utilization review services to clients and do not make coverage determinations. References to standard benefit plan language and coverage determinations do not apply to those clients. Coverage Policies are intended to provide guidance in 11 Pages - Cigna National Formulary Coverage - Policy:Contraceptives – Oral, Patch, and Vaginal Ring Products Step Therapy Policy

*interpreting certain standard benefit plans administered by Cigna Companies. Please note, the terms of a customer's particular benefit plan document [Group Service Agreement, Evidence of Coverage, Certificate of Coverage, Summary Plan Description (SPD) or similar plan document] may differ significantly from the standard benefit plans upon which these Coverage Policies are based. For example, a customer's benefit plan document may contain a specific exclusion related to a topic addressed in a Coverage Policy. In the event of a conflict, a customer's benefit plan document always supersedes the information in the Coverage Policies. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan document. Coverage determinations in each specific instance require consideration of 1) the terms of the applicable benefit plan document in effect on the date of service; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Coverage Policies and; 4) the specific facts of the particular situation. Coverage Policies relate exclusively to the administration of health benefit plans. Coverage Policies are not recommendations for treatment and should never be used as treatment guidelines. In certain markets, delegated vendor guidelines may be used to support medical necessity and other coverage determinations.*

## **Cigna National Formulary Coverage:**

### **OVERVIEW**

Combined oral contraceptives are sometimes called "the pill" and are one of the most commonly used form of contraception.<sup>1</sup> Along with the oral tablets, hormonal contraceptives are also available as transdermal patches and vaginal rings.

Hormonal contraceptives contain a combination of estrogen and progestin or progestin alone.<sup>2</sup> The hormones prevent ovulation and can also prevent fertilized eggs from implanting in the womb. Estrogens suppress follicle-stimulating hormone (FSH) release from the pituitary, which may block the luteinizing hormone (LH) surge and prevent ovulation. Progestins provide most of the other contraceptive effects such as cervical mucus changes, which inhibit sperm penetration and motility. Progestins also induce endometrial atrophy, which helps to prevent pregnancy. Oral contraceptives are an effective method of reversible birth control.<sup>3</sup>

### **Combined Oral contraceptives (COCs)**

COCs are available in monophasic, biphasic, triphasic, or four-phasic combinations.<sup>2</sup> The monophasic COCs maintain the same dose of estrogen and progestin throughout the cycle (21 days of active pills, 7 days of placebo). An extended cycle 84-day monophasic regimen is also available (e.g., Seasonale, generic). The estrogen and/or progestin doses are varied throughout the cycle for different time intervals in the bi-, tri-, and four-phasic COCs. All COCs have similar efficacy irrespective of monophasic or multiphasic regimens. The multiphasic regimens are generally used to minimize patient specific symptoms (e.g., nausea, breakthrough bleeding).

### **Progesterin-Only Oral Contraceptives**

Progesterone-only products provide an alternative for patients with contraindications to estrogen-containing hormonal contraceptives. Progesterin-only contraceptives may be more favorable in women with certain medical conditions (e.g., venous thromboembolism) or women who are breastfeeding.<sup>4</sup> Most progesterone-only oral contraceptives contain norethindrone 0.35 mg. Slynd is a progesterone-only oral contraceptive containing drospirenone.<sup>6</sup> Drospirenone is

also available as the progesterone component of numerous oral contraceptives containing ethinyl estradiol. Because drospirenone has antimineralcorticoid activity, drospirenone-containing products are contraindicated in patients with conditions which predispose them to hyperkalemia, including renal disease, hepatic dysfunction, and adrenal insufficiency.

### **Transdermal Patches**

Ortho Evra and its generics, Xulane and Zafemy, are transdermal patches composed of ethinyl estradiol and norelgestromin (35 mcg ethinyl estradiol and 150 mcg norelgestromin released every 24 hours).<sup>5,8</sup> The brand, Ortho Evra, was discontinued in 2015 by the manufacturer, but the generics are still available. The only other transdermal contraceptive patch is Twirla, composed of ethinyl estradiol and levonorgestrel (30 mcg ethinyl estradiol and 120 mcg levonorgestrel released every 24 hours).<sup>7</sup> Both transdermal patches are contraindicated (Boxed Warning) for use in women with a body mass index (BMI)  $\geq 30 \text{ kg/m}^2$ .<sup>5,7</sup> Generics for Ortho Evra have a limitation of use that it may be less effective in preventing pregnancy in women who weigh more than 198 pounds (90 kg).<sup>5,8</sup> Twirla has a limitation of use to consider the reduced effectiveness in women with a BMI  $\geq 25$  to  $< 30 \text{ kg/m}^2$ .<sup>7</sup> Generic Ortho Evra products also have additional warnings in the labeling regarding higher estrogen exposure compared with oral contraceptives containing ethinyl estradiol 35 mcg.<sup>5,8</sup>

### **Vaginal Rings**

NuvaRing and its generics, etonogestrel-ethinyl estradiol, Eluryng, and Haloette, are vaginal rings indicated to prevent pregnancy.<sup>9,11,12</sup> These products are disposable rings; one ring used continuously for 3 weeks, followed by a 1-week ring-free interval. Annovera is a reusable ring with one ring providing contraception for 13 cycles.<sup>10</sup> The cycles are 3 weeks with vaginal ring inserted and 1 week with the vaginal ring removed. Annovera contains ethinyl estradiol and segesterone acetate.

### **POLICY STATEMENT**

This program has been developed to encourage the use of a Step 1 Product prior to the use of a Step 2 Product. If the Step Therapy rule is not met for a Step 2 Product at the point of service, coverage will be determined by the Step Therapy criteria below. All approvals are provided for 1 year in duration.

Note: When compliance with the Affordable Care Act, Health Resources and Services Administration Guidelines, and Public Health Services Act section 2713 is required and the conditions for coverage listed under the Criteria are not met, approval is granted when the requested drug is used primarily for the prevention of pregnancy and, according to the prescriber, the alternative Step 1 Products would not be as medically appropriate for the patient as the requested drug.

**Contraceptives – Oral, Patch, and Vaginal Ring product(s) is(are) covered as medically necessary when the following step therapy criteria is(are) met. Any other exception is considered not medically necessary.**

**Step 1:** Generic oral contraceptives, transdermal Xulane, transdermal Zafemy, etonogestrel-ethinyl estradiol vaginal ring, Eluryng vaginal ring, Haloette vaginal ring

**Step 2:** Brand oral contraceptives, transdermal Twirla, NuvaRing, Annovera

## **CRITERIA**

1. If the patient has tried one Step 1 Product, approve a Step 2 Product.
