

## DRUG QUANTITY MANAGEMENT POLICY – MORPHINE MILLIGRAM EQUIVALENT

**POLICY:** Opioids – Morphine Milligram Equivalent (200) Drug Quantity Management Policy

**Note: This is not an inclusive list. As new products become available, they will roll into this policy and the list will be updated periodically.**

- Benzhydrocodone combination oral tablets
- Butorphanol injectable, nasal solution
- Codeine oral tablets, combination product oral tablets/capsules, combination product oral solution
- Dihydrocodeine combination oral tablets/capsules
- Fentanyl transmucosal lozenges, injectable, transdermal patches
- Hydrocodone oral tablets/capsules, combination product oral tablets, combination product oral solution
- Hydromorphone injectable, oral tablets, oral solution, rectal suppositories
- Levorphanol oral tablets
- Meperidine oral tablets, oral solution, injectable
- Methadone oral tablets, tablets for oral suspension, oral solution, injectable
- Morphine oral capsules/tablets, oral solution, injectable, rectal suppositories
- Nalbuphine injectable
- Oliceridine injectable
- Opium/belladonna rectal suppositories
- Oxycodone oral tablets/capsules, oral solution, combination product oral tablets, combination product oral solution
- Oxymorphone oral tablets
- Pentazocine/naloxone oral tablets
- Tapentadol oral tablets
- Tramadol oral capsules/tablets, oral solution, combination product oral tablets

**REVIEW DATE:** 03/04/2025

---

### INSTRUCTIONS FOR USE

THE FOLLOWING COVERAGE POLICY APPLIES TO HEALTH BENEFIT PLANS ADMINISTERED BY CIGNA COMPANIES. CERTAIN CIGNA COMPANIES AND/OR LINES OF BUSINESS ONLY PROVIDE UTILIZATION REVIEW SERVICES TO CLIENTS AND DO NOT MAKE COVERAGE DETERMINATIONS. REFERENCES TO STANDARD BENEFIT PLAN LANGUAGE AND COVERAGE DETERMINATIONS DO NOT APPLY TO THOSE CLIENTS. COVERAGE POLICIES ARE INTENDED TO PROVIDE GUIDANCE IN INTERPRETING CERTAIN STANDARD BENEFIT PLANS ADMINISTERED BY CIGNA COMPANIES. PLEASE NOTE, THE TERMS OF A CUSTOMER'S PARTICULAR BENEFIT PLAN DOCUMENT [GROUP SERVICE AGREEMENT, EVIDENCE OF COVERAGE, CERTIFICATE OF COVERAGE, SUMMARY PLAN DESCRIPTION (SPD) OR SIMILAR PLAN DOCUMENT] MAY DIFFER SIGNIFICANTLY FROM THE STANDARD BENEFIT PLANS UPON WHICH THESE COVERAGE POLICIES ARE BASED. FOR EXAMPLE, A CUSTOMER'S BENEFIT PLAN DOCUMENT MAY CONTAIN A SPECIFIC EXCLUSION RELATED TO A TOPIC ADDRESSED IN A COVERAGE

POLICY. IN THE EVENT OF A CONFLICT, A CUSTOMER'S BENEFIT PLAN DOCUMENT ALWAYS SUPERSEDES THE INFORMATION IN THE COVERAGE POLICIES. IN THE ABSENCE OF A CONTROLLING FEDERAL OR STATE COVERAGE MANDATE, BENEFITS ARE ULTIMATELY DETERMINED BY THE TERMS OF THE APPLICABLE BENEFIT PLAN DOCUMENT. COVERAGE DETERMINATIONS IN EACH SPECIFIC INSTANCE REQUIRE CONSIDERATION OF 1) THE TERMS OF THE APPLICABLE BENEFIT PLAN DOCUMENT IN EFFECT ON THE DATE OF SERVICE; 2) ANY APPLICABLE LAWS/REGULATIONS; 3) ANY RELEVANT COLLATERAL SOURCE MATERIALS INCLUDING COVERAGE POLICIES AND; 4) THE SPECIFIC FACTS OF THE PARTICULAR SITUATION. EACH COVERAGE REQUEST SHOULD BE REVIEWED ON ITS OWN MERITS. MEDICAL DIRECTORS ARE EXPECTED TO EXERCISE CLINICAL JUDGMENT WHERE APPROPRIATE AND HAVE DISCRETION IN MAKING INDIVIDUAL COVERAGE DETERMINATIONS. WHERE COVERAGE FOR CARE OR SERVICES DOES NOT DEPEND ON SPECIFIC CIRCUMSTANCES, REIMBURSEMENT WILL ONLY BE PROVIDED IF A REQUESTED SERVICE(S) IS SUBMITTED IN ACCORDANCE WITH THE RELEVANT CRITERIA OUTLINED IN THE APPLICABLE COVERAGE POLICY, INCLUDING COVERED DIAGNOSIS AND/OR PROCEDURE CODE(S). REIMBURSEMENT IS NOT ALLOWED FOR SERVICES WHEN BILLED FOR CONDITIONS OR DIAGNOSES THAT ARE NOT COVERED UNDER THIS COVERAGE POLICY (SEE "CODING INFORMATION" BELOW). WHEN BILLING, PROVIDERS MUST USE THE MOST APPROPRIATE CODES AS OF THE EFFECTIVE DATE OF THE SUBMISSION. CLAIMS SUBMITTED FOR SERVICES THAT ARE NOT ACCOMPANIED BY COVERED CODE(S) UNDER THE APPLICABLE COVERAGE POLICY WILL BE DENIED AS NOT COVERED. COVERAGE POLICIES RELATE EXCLUSIVELY TO THE ADMINISTRATION OF HEALTH BENEFIT PLANS. COVERAGE POLICIES ARE NOT RECOMMENDATIONS FOR TREATMENT AND SHOULD NEVER BE USED AS TREATMENT GUIDELINES. IN CERTAIN MARKETS, DELEGATED VENDOR GUIDELINES MAY BE USED TO SUPPORT MEDICAL NECESSITY AND OTHER COVERAGE DETERMINATIONS.

## CIGNA NATIONAL FORMULARY COVERAGE:

### OVERVIEW

Use of morphine milligram equivalents (MME) as a method to assess opioid-associated risk based on overall daily opioid dose has been cited in the professional literature and pain guidelines.<sup>1</sup> There is not one universally accepted MME per day that has been found to represent the dose at which a patient is at the greatest risk for adverse events (AEs). However, there is general consensus that as opioid doses are increased, the risk of AEs also increases. Additional guideline information is summarized below. Of note, the Centers for Medicare and Medicaid Services (CMS) require plan sponsors to implement a point-of-service safety edit at 90 MME and recommend a hard safety edit at a threshold of 200 MME.<sup>2</sup>

### Guidelines

In 2022, the **Centers for Disease Control and Prevention (CDC)** published an updated guideline for prescribing opioids for pain.<sup>1</sup> Nonopioid therapies are at least as effective as opioids for many common types of acute pain, and nonopioid therapies are preferred for subacute and chronic pain. Clinicians should maximize the use of nonpharmacologic and nonopioid pharmacologic therapies as appropriate for the specific condition and patient and only consider initiating opioid therapy if expected benefits for pain and function are anticipated to outweigh risks to the patient. Multiple noninvasive nonpharmacologic interventions (e.g., aerobic, aquatic, or resistance exercises, weight loss, psychological therapy, spinal manipulation, low-level laser therapy, massage, mindfulness-based stress reduction, yoga, tai chi, qigong, acupuncture, cognitive behavioral therapy, and spinal manipulation) are associated with improvements in pain, function, or both, that are sustained after treatment and are not associated with serious harms. Non-opioid drugs (e.g., tricyclic antidepressants, serotonin and norepinephrine reuptake inhibitor [SNRI] antidepressants, duloxetine, selected antiseizure medications (e.g., pregabalin, gabapentin, oxcarbazepine), capsaicin and lidocaine patches, and nonsteroidal anti-inflammatory drugs [NSAIDs]) are associated with small to moderate improvements in chronic pain and function for certain chronic pain conditions.

Before initiating opioid therapy for patients with pain, clinicians should discuss with patients the realistic benefits and known risks of opioid therapy.<sup>1</sup> Before starting ongoing opioid therapy for patients with subacute or chronic pain, clinicians should work with patients to establish treatment goals for pain and function and consider how opioid therapy will be discontinued if benefits do not outweigh risks. When opioids are initiated, clinicians should prescribe the lowest effective dosage of immediate-release opioids for no longer than needed for the expected duration of pain severe enough to require opioids. During ongoing opioid therapy, clinicians should collaborate with patients to evaluate and carefully weigh the benefits and risks of continuing opioid therapy and exercise care when increasing, continuing, or reducing opioid dosage. While they do not make specific dosing recommendations, it is noted that many patients do not experience additional pain reduction or improved function from increasing their opioid dose to  $\geq 50$  MME per day, but they are exposed to progressive increased risks. Therefore, before increasing a patient's dose to  $\geq 50$  MME per day, clinicians should pause and reassess the individual patient's benefits and risks. Guidelines also note that few trials have evaluated doses  $\geq 90$  MME per day.

Before starting and periodically during continuation of opioid therapy, clinicians should evaluate the risk for opioid-related harms and should work with patients to incorporate relevant strategies to mitigate risk, including offering naloxone and reviewing potential interactions with any other prescribed medications or substances used.<sup>1</sup> When prescribing initial opioid therapy and periodically during opioid therapy, clinicians should review the patient's history of controlled substance prescriptions using state prescription drug monitoring program (PDMP) data to determine whether the patient is receiving opioid dosages or combinations that put the patient at high risk for overdose. When prescribing opioids for subacute or chronic pain, clinicians should consider the benefits and risks of toxicology testing to assess for prescribed medications as well as other prescribed and non-prescribed controlled substances.

The 2020 **American Society of Hematology** guideline for the management of acute and chronic pain in patients with sickle cell disease states that pain causes significant morbidity for those living with sickle cell disease and manifests as acute intermittent pain, chronic daily pain, and acute-on-chronic pain.<sup>3</sup> For adults and children with chronic pain who are receiving chronic opioid therapy, are functioning well, and have perceived benefit, the guideline suggests shared decision making for continuation of chronic opioid therapy. For adults and children with chronic pain who are receiving chronic opioid therapy, are functioning poorly, or are at high risk for aberrant opioid use or toxicity, the guideline suggests against continuation of chronic opioid therapy.

## **POLICY STATEMENT**

This Drug Quantity Management program has been developed to prevent stockpiling, misuse and/or overuse of opioids.

The MME (200) DQM policy works in combination with the MME (90) DQM policy. A total quantity of opioid of up to MME of 200 per day is approved if the patient meets the criteria in the MME 90 policy.

A MME is calculated for each patient's opioid prescription claim using the appropriate conversion factor associated with the opioid product for the claim. After converting the patient's opioid medications to their MME, the patient's cumulative prescription opioid daily dose (the MME per day) is calculated to determine if the member exceeded the 200 MME threshold. If a prescription will cause the patient to exceed the cumulative daily MME threshold of 200, then it will reject and additional coverage will be determined by the Criteria below. All approvals are provided for 1 year in duration, unless otherwise noted.

Note: This policy includes multiple formulations of the medications listed on page 1; the list is not inclusive. As new products become available, they will roll into this policy and the list will be updated periodically. Opioid cough and cold products are excluded from the calculations of MMEs. Point of sale alerts also manage the quantity of opioid product distribution. Those point of sale alerts occur prior to any Utilization Management edits.

**Documentation:** Documentation is required for approval of additional quantities of opioids over 600 MMEs per day as noted in the criteria as **[documentation required]**. Documentation may include, but is not limited to, chart notes, prescription claims records, prescription receipts, and/or other information.

***Opioids – Morphine Milligram Equivalent (200) Drug Quantity Management Policy*** product(s) is(are) covered as medically necessary when the following criteria is(are) met. Any other exception is considered not medically necessary.

## **CRITERIA**

**Requests for a daily morphine milligram equivalent dose of > 200 and ≤ 600:**

- 1.** Approve the requested quantity not to exceed 600 morphine milligram equivalents (MME) daily for up to 1 year, if the patient meets ONE of the following (A, B, C, or D):
  - A)** Patient has a cancer diagnosis; OR
  - B)** Patient is in a hospice program, end-of-life care, or palliative care; OR
  - C)** Patient meets BOTH of the following (i and ii):
    - i.** Patient has a diagnosis of sickle cell disease; AND
    - ii.** Medication is being prescribed by or in consultation with a hematologist;OR

- D)** Patient meets ALL of the following (i, ii, iii, iv, v, and vi):
- i.** Non-opioid therapies have been optimized and are being used in conjunction with opioid therapy, according to the prescriber; AND  
Note: Examples of non-opioid therapies include non-opioid medications (e.g., nonsteroidal anti-inflammatory drugs, tricyclic antidepressants, serotonin and norepinephrine reuptake inhibitors, antiseizure medications), exercise therapy, physical therapy, weight loss, and cognitive behavioral therapy.
  - ii.** Patient's history of controlled substance prescriptions has been checked using the state prescription drug monitoring program (PDMP), according to the prescriber; AND
  - iii.** Risks (e.g., addiction, overdose) and realistic benefits of opioid therapy have been discussed with the patient, according to the prescriber; AND
  - iv.** Patient has a treatment plan or pain contract (including goals for pain and function) in place and has reassessments (including pain levels and function) scheduled at regular intervals according to the prescriber; AND
  - v.** Need for a naloxone prescription has been assessed and naloxone has been ordered, if necessary, according to the prescriber; AND
  - vi.** Need for periodic toxicology testing has been assessed and ordered, if necessary, according to the prescriber.

Note: A morphine milligram equivalent calculator can be found at:  
<https://www.mdcalc.com/calc/10170/morphine-milligram-equivalents-mme-calculator>.

**Requests for a daily morphine milligram equivalent dose of > 600:**

- 1.** Approve the morphine milligram equivalent (MME) daily dose requested for up to 1 year, if the patient meets ONE of the following (A, B, C, or D):
- A)** Patient has a cancer diagnosis; OR
  - B)** Patient is in a hospice program, end-of-life care, or palliative care; OR
  - C)** Patient meets BOTH of the following (i and ii):
    - i.** Patient has a diagnosis of sickle cell disease; AND
    - ii.** Medication is being prescribed by or in consultation with a hematologist; OR
  - D)** Patient meets ALL of the following (i, ii, iii, iv, v, and vi):
    - i.** Non-opioid therapies have been optimized and are being used in conjunction with opioid therapy, according to the prescriber; AND  
Note: Examples of non-opioid therapies include non-opioid medications (e.g., nonsteroidal anti-inflammatory drugs, tricyclic antidepressants, serotonin and norepinephrine reuptake inhibitors, antiseizure medications), exercise therapy, physical therapy, weight loss, and cognitive behavioral therapy.
    - ii.** Patient's history of controlled substance prescriptions has been checked using the state prescription drug monitoring program (PDMP), according to the prescriber; AND
    - iii.** Risks (e.g., addiction, overdose) and realistic benefits of opioid therapy have been discussed with the patient according to the prescriber; AND

- iv. Patient has a treatment plan or pain contract (including goals for pain and function) in place and has reassessments (including pain levels and function) scheduled at regular intervals **[documentation required]**; AND
- v. Need for a naloxone prescription has been assessed and naloxone has been ordered, if necessary, according to the prescriber; AND
- vi. Need for periodic toxicology testing has been assessed and ordered, if necessary, according to the prescriber.

Note: A morphine milligram equivalent (MME) calculator can be found at: <https://www.mdcalc.com/calc/10170/morphine-milligram-equivalents-mme-calculator>.
