Drug Coverage Policy

Effective Date.....9/15/2026
Coverage Policy Number.....IP0775
Policy Title.....Brinsupri for Employer Plans

Pulmonary – Brinsupri for Employer Plans

- Brinsupri™ (brensocatib tablets – Insmed)

INSTRUCTIONS FOR USE
The following Coverage Policy applies to health benefit plans administered by Cigna Companies. Certain Cigna Companies and/or lines of business only provide utilization review services to clients and do not make coverage determinations. References to standard benefit plan language and coverage determinations do not apply to those clients. Coverage Policies are intended to provide guidance in interpreting certain standard benefit plans administered by Cigna Companies. Please note, the terms of a customer's particular benefit plan document [Group Service Agreement, Evidence of Coverage, Certificate of Coverage, Summary Plan Description (SPD) or similar plan document] may differ significantly from the standard benefit plans upon which these Coverage Policies are based. For example, a customer's benefit plan document may contain a specific exclusion related to a topic addressed in a Coverage Policy. In the event of a conflict, a customer's benefit plan document always supersedes the information in the Coverage Policies. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan document. Coverage determinations in each specific instance require consideration of 1) the terms of the applicable benefit plan document in effect on the date of service; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Coverage Policies and; 4) the specific facts of the particular situation. Each coverage request should be reviewed on its own merits. Medical directors are expected to exercise clinical judgment where appropriate and have discretion in making individual coverage determinations. Where coverage for care or services does not depend on specific circumstances, reimbursement will only be provided if a requested service(s) is submitted in accordance with the relevant criteria outlined in the applicable Coverage Policy, including covered diagnosis and/or procedure code(s). Reimbursement is not allowed for services when billed for conditions or diagnoses that are not covered under this Coverage Policy (see "Coding Information" below). When billing, providers must use the most appropriate codes as of the effective date of the submission. Claims submitted for services that are not accompanied by covered code(s) under the applicable Coverage Policy will be denied as not covered. Coverage Policies relate exclusively to the administration of health benefit plans. Coverage Policies are not recommendations for treatment and should never be used as treatment guidelines. In certain markets, delegated vendor guidelines may be used to support medical necessity and other coverage determinations.

OVERVIEW
Brinsupri, a dipeptidyl peptidase 1 (DPP1) inhibitor, is indicated for the treatment of **non-cystic fibrosis bronchiectasis** in adult and pediatric patients 12 years of age and older.[1]

Disease Overview
Non-cystic fibrosis bronchiectasis is a chronic lung disease characterized by the cough and sputum production, as well as the presence of abnormal thickening and dilation of the bronchial wall visible on lung imaging.[2] Bronchiectasis affects patients to varying degrees; some patients will develop repeated respiratory infections requiring long-term antibiotic therapies, disabling productive cough, shortness of breath, and occasional hemoptysis. An estimated 500,000 Americans have been diagnosed with bronchiectasis; however, it is expected to be underdiagnosed or misdiagnosed. One review reported that bronchiectasis was the third most common airway disease after chronic obstructive pulmonary disease and asthma. Recurrent pulmonary exacerbations are common in non-cystic fibrosis bronchiectasis; they are defined as worsening of three or more of the following major symptoms over 48 hours that results in the prescription of an antibiotic agent: increased cough, increased sputum volume or change in sputum consistency, increased sputum purulence, increased breathlessness, decreased exercise tolerance, fatigue and/or malaise, and hemoptysis.[3]

There are no approved treatments or therapies for bronchiectasis; treatments have previously revolved around antibiotics to treat infections and airway clearance to remove excessive mucus.[3] Targeting DPP1 (also known as cathepsin C [CatC]) is a novel anti-inflammatory treatment strategy.

Guidelines
There are no US guidelines for the treatment of bronchiectasis. However, there are several other international guidelines, including by the European Respiratory Society (ERS) and the British Thoracic Society (BTS).[4,5] Brinsupri is not yet included. The American Thoracic Society has not developed standalone guidelines but has endorsed both ERS and BTS recommendations.[6] The management of bronchiectasis generally depends on the number of exacerbations patients have in one year. All existing guidelines and recommendation statements recommend against the routine use of corticosteroids in non-cystic fibrosis bronchiectasis. Other core components of treatment include airway clearance, use of exercise programs and pulmonary rehabilitation, mucolytics, and consideration of long-term antibiotics (e.g., macrolides and inhaled antibiotics) for patients with frequent exacerbations or bacterial isolation.

Coverage Policy

POLICY STATEMENT
Prior Authorization is required for benefit coverage of Brinsupri. All approvals are provided for the duration noted below. Because of the specialized skills required for evaluation and diagnosis of patients treated with Brinsupri as well as the monitoring required for adverse events and long-term efficacy, approval requires Brinsupri to be prescribed by or in consultation with a physician who specializes in the condition being treated.

Documentation: Documentation is required where noted in the criteria as **[documentation required]**. Documentation may include, but is not limited to, chart notes, laboratory tests, claims records, and/or other information. All documentation must include patient-specific identifying information.

Brinsupri is considered medically necessary when the following criteria are met:

FDA-Approved Indication

1. **Bronchiectasis, Non-Cystic Fibrosis.** Approve for the duration noted if the patient meets ONE of the following (A or B):
   - **A)** Initial Therapy. Approve for 1 year if the patient meets ALL of the following (i, ii, iii, iv, v, vi, and vii):
     - **i.** Patient is ≥ 12 years of age; AND
     - **ii.** Patient has a history of bronchiectasis as diagnosed by chest computed tomography **[documentation required]**; AND
     - **iii.** Patient meets ONE of the following (a or b):
       - **a)** Patient is ≥ 12 years of age and < 18 years of age: Patient has had at least one pulmonary exacerbation in the last 12 months that resulted in the prescription of an antibiotic agent; OR
       - **b)** Patient is ≥ 18 years of age: Patient has had at least two pulmonary exacerbations in the last 12 months that resulted in the prescription of an antibiotic agent; AND
     - **iv.** According to the prescriber, respiratory symptoms are not driven primarily by chronic obstructive pulmonary disease or asthma; AND
     - **v.** Patient does not have cystic fibrosis; AND
     - **vi.** According to the prescriber, patient is a current non-smoker; AND
     - **vii.** The medication is prescribed by or in consultation with a pulmonologist or infectious disease physician; OR
   - **B)** Patient is Currently Receiving Brinsupri. Approve for 1 year if the patient meets ALL of the following (i, ii, iii, iv, and v):
     - **i.** Patient is ≥ 12 years of age; AND
     - **ii.** Patient does not have cystic fibrosis; AND
     - **iii.** According to the prescriber, patient is a current non-smoker; AND
     - **iv.** According to the prescriber, patient has experienced a beneficial clinical response; AND
       Note: Examples of beneficial clinical response may include a reduction in the number of exacerbations, preservation of lung function, reduced cough, reduced sputum production, or less shortness of breath
     - **v.** The medication is prescribed by or in consultation with a pulmonologist or infectious disease physician.

Conditions Not Covered

Brinsupri for any other use is considered not medically necessary. Criteria will be updated as newly published data are available.
