

## Drug Coverage Policy

Effective Date .....07/01/2025

Coverage Policy Number.....ST0001

Policy Title.....Methotrexate Injection  
Step Therapy

# Methotrexate Injection Step Therapy Standard / Performance Drug List Plans

- Methotrexate sodium (solution for injection - various manufacturers)
- Rasuvo® (methotrexate subcutaneous injection autoinjector – Medac)

---

### INSTRUCTIONS FOR USE

The following Coverage Policy applies to health benefit plans administered by Cigna Companies. Certain Cigna Companies and/or lines of business only provide utilization review services to clients and do not make coverage determinations. References to standard benefit plan language and coverage determinations do not apply to those clients. Coverage Policies are intended to provide guidance in interpreting certain standard benefit plans administered by Cigna Companies. Please note, the terms of a customer's particular benefit plan document [Group Service Agreement, Evidence of Coverage, Certificate of Coverage, Summary Plan Description (SPD) or similar plan document] may differ significantly from the standard benefit plans upon which these Coverage Policies are based. For example, a customer's benefit plan document may contain a specific exclusion related to a topic addressed in a Coverage Policy. In the event of a conflict, a customer's benefit plan document always supersedes the information in the Coverage Policies. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan document. Coverage determinations in each specific instance require consideration of 1) the terms of the applicable benefit plan document in effect on the date of service; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Coverage Policies and; 4) the specific facts of the particular situation. Each coverage request should be reviewed on its own merits. Medical directors are expected to exercise clinical judgment where appropriate and have discretion in making individual coverage determinations. Where coverage for care or services does not depend on specific circumstances, reimbursement will only be provided if a requested service(s) is submitted in accordance with the relevant criteria outlined in the applicable Coverage Policy, including covered diagnosis and/or procedure code(s). Reimbursement is not allowed for services when billed for conditions or diagnoses that are not covered under this Coverage Policy (see "Coding Information" below). When billing, providers must use the most appropriate codes as of the effective date of the submission. Claims submitted for services that are not accompanied by covered code(s) under the applicable Coverage Policy will be denied as not covered. Coverage Policies relate exclusively to the administration of health benefit plans. Coverage Policies are not recommendations for treatment and should never be used as treatment guidelines. In certain markets, delegated vendor guidelines may be used to support medical necessity and other coverage determinations.

---

## Overview

Methotrexate has been widely studied and is commonly used for treatment of **inflammatory conditions**, including rheumatoid arthritis, juvenile idiopathic arthritis, and plaque psoriasis.<sup>1</sup>

All of the injectable methotrexate products require proper patient training in sterile injection technique and require a patient to have the manual dexterity to self-inject.<sup>5</sup> For inflammatory conditions, the dose of methotrexate is initiated low and adjusted gradually to achieve optimal response and/or tolerability, generally to a maximum of 25 to 30 mg/week.<sup>1,6-8</sup> Flexibility to decrease or increase methotrexate dosing, including in 2.5-mg increments, may be needed in clinical practice. Generic injectable methotrexate is available as a 25 mg/mL injection solution (single-dose and multi-dose vials) and provides flexibility in dose adjustments.<sup>5</sup> Otrexup, Rasuvo, and RediTrex are available as preservative-free, single-dose injections for subcutaneous use.<sup>6-8</sup> A formulation other than Otrexup, Rasuvo, or RediTrex should be used for patients who require a route of administration other than subcutaneous, for doses that are not available in the respective product, and for dose adjustments in < 2.5 mg increments.

## Coverage Policy

### POLICY STATEMENT

This program has been developed to encourage the use of a Step 1 Product prior to the use of a Step 2 Product. If the Step Therapy rule is not met for a Step 2 Product at the point of service, coverage will be determined by the Step Therapy criteria below. All approvals are provided for 1 year in duration. The use of Otrexup is not addressed in this policy.

Note: Unless administered by a healthcare provider, all of the injectable methotrexate products, including Rasuvo, Otrexup, and RediTrex, require proper patient training in sterile injection technique and require a patient or caregiver to have the manual dexterity to inject.

**Step 1:** Generic methotrexate injection (single- or multi-dose vials)

**Step 2:** Rasuvo

**Methotrexate Injection Step Therapy Policy products are covered as medically necessary when the following step therapy criteria are met.**

### CRITERIA

1. If the patient has tried ONE Step 1 Product, approve a Step 2 Product.
2. If, according to the prescriber, the patient and/or caregiver is/are unable to administer generic methotrexate injection (single-dose or multi-dose vial NOT including Otrexup, Rasuvo, or RediTrex), approve a Step 2 Product.

**Any other exception is considered not medically necessary.**
